An important new scientific review of lymphatic microsurgery from Quebec

By Marie-Eve Letellier

References

The INESSS report is a thorough evaluation of the literature. Their mandate was to evaluate the clinical relevance of lymphaticovenous anastomosis (LVA) and vascularized lymph node transfer (VLNT), both in prevention (the procedure is called LYMPHA) and in treatment of cancer-related lymphedema. With this report, the INESSS is providing recommendations regarding the organization of lymphatic surgery services in the province of Quebec.

The full report and summary are available at: [Avis - Utilisation des microchirurgies pour la prévention et le traitement du lymphœdème lié au cancer \(www.inesss.qc.ca\)](http://www.inesss.qc.ca). (The full report is available only in French, however a six-page English summary is included).
